Practical - 3

Practical Title: Responsive UI Design using CSS Grid, Flexbox, and Bootstrap/Tailwind

Problem Definition: Design responsive layouts for Home, About, Registration, Dashboard, and Events pages using CSS Grid and Flexbox. Optional to use CSS framework such as Bootstrap or Tailwind. Ensure mobile-first responsiveness

M. Theory

1. How does the layout adapt for mobile, tablet, and desktop screens?

Answer: Using media queries in css so the website changes css based on the size of the screen
https://www.geeksforgeeks.org/websites-apps/responsive-web-design/

2. Which layout technique is used and why?

Answer: Flexbox and grid is used so that the elements are arranged properly in any way we want
https://www.w3schools.com/css/css_grid.asp
https://www.w3schools.com/css/css3_flexbox.asp

3. Are typography, spacing, colors, and contrast readable?

Answer: Yes

4. Is the framework used consistently without unnecessary inline CSS?

Answer: Did not use framework

N. Implementation/ Output/Result (Keep only one option which is suitable to practical)

CSS selectors, colors, the box model, Flexbox, CSS Grid, positioning, borders, border-radius, transitions, hover effects, form styling and responsive design using media queries

Q. Challenges Faced:

Designing every page using css, creating animations and transition
Arranging elements using flexbox and grid and changing according to the screen size

R. Learning Outcomes:

Learned how to use CSS,selectors, classes and IDs,
apply colors, fonts, borders, spacing and shadows, use Flexbox and Grid for layouts, create hover effects and animations, and media queries.
