Practical - 7

Practical Title: PHP Form Processing with Server-Side Validation and CSV/JSON File Storage

Process submitted registration/contact form data using PHP. Validate and sanitize inputs on the server side and store records in CSV or JSON file format. Display success/error messages.

HH. Theory

1. Is the form submitted using POST?
Answer - Yes, the form is submitted using POST.

2. Are inputs validated and sanitized server side?
Answer -Yes, inputs are validated and sanitized on the server side.

3. Is file writing handled safely?
Answer - Yes, file writing is handled safely.

4. Are success and error responses displayed clearly?
Answer - Yes, clear success and error messages are displayed.
